Both have frame & Masking kit.

- **AUDIO & SOUND:**

Power

There are 2 separate electrical tie-in boxes both are located back stage at the rear center stage entrance. One is a 400 amp 3 phase service and the other is a 200 amp 3 phase service. Both units are equipped with cam-lock style connectors on the bottoms of each panel. Ground (green) and Neutral (white) are reversed to code. In addition, the house power amps are wired on a separate leg with an isolated ground. No licensed electrician is required to tie in to cam connections

200 Amp 3 phase Power Distro W/ Stage Power Box

Wiring

Microphone/Speaker Inputs

There is a 3 way transformer Audio splitter, 48 mono channels & 8 return channels, All with ground lifts. In case there is a recording truck or separate recording room along with FOH and Monitors, We do provide a 200ft. snake with a 6ft. 48 mono Ch. & 8 return Ch. Fan out.

Control Locations

The house mix position is located approximately 90 feet from the downstage edge. It is centered on the stage and approximately 30' behind the leading edge of the balcony. The area is approximately 25' x 12' and houses the FOH console and 3 locking racks with all processing equipment with exception to the main speaker management system (located in the amplifier room). 6 Renkus Heinz balcony speakers have been delayed and positioned approximately 20 feet in front of mix position to fill the under balcony area. The New Yamaha CL-5 is the FOH Console. All equipment in the racks can be patched using the supplied patch bay except one ACP88 comp/gate which can be manually inserted using

the supplied insert cable. The FOH spare console is a Yamaha PM4000 and has 48 mono and 4 stereo channels. All inputs, auxes, processing and matrix may be accessed using the supplied patch bay. F.O.H. will consist of a **True** 4way stereo mix, with 3way EAW KF650, dual EAW SB600 Subs Processed with the EAW MX8750 Driverack.

Hearing Assistance System

The house is equipped with an assisted listening system - Brand name "Listen". It is fed by the main L/R out puts of the FOH console and routed to an infrared transmitter. The patrons can receive belt pack and ear piece devices at the box office on an "as needed" basis. There are a total of 20 complete belt pack and ear speaker sets available at this time.

Monitor/Paging System

There are 4 zones covered by the current monitor/paging system. 1. The dressing room areas. 2. The lobby and offices areas. 3. The restroom and lower theatre area. 4. The balcony area. All zones are fed the main L/R signal and cannot be attenuated from FOH. The dressing room and theater zones can be remotely driven by using a rack mounted TOA mixer/amp with a standard microphone. The mixer can be patched down stage left or right in the wings on the side of either microphone input panels using the special patching cable provided in the rack. The unit can be set to alert the house or dressing rooms exclusively.

Production Communications

Clearcom communications supplied at FOH, Lighting Booth, Back stage L & R (downstage wings). Head sets and belt packs for a total of 7 positions available in house.
